

HOME EV CHARGING

EV Charger Quote Prep Checklist

Buying an EV? Use this sheet to gather the details an installer needs, then compare quotes for the same work.

01 Your vehicle and charging routine

- ☐ Note the vehicle make, model and year, plus any charger you already own.
- ☐ Estimate your daily driving and the hours the vehicle normally stays parked.

02 Your everyday parking spot

- ☐ Mark the preferred charger position and the vehicle's charging-port location.
- ☐ Say whether you park indoors, outdoors or in a detached garage.

03 Three useful photos

- ☐ Photograph the panel area with the protective cover kept in place.
- ☐ Photograph the parking space and preferred charger location; show nearby access.

04 The route and any approvals

- ☐ Describe where the panel is relative to parking; note finished walls or ceilings.
- ☐ Flag condo/owner approvals, shared parking and any planned electrical upgrades.

05 Questions for the installer

- ☐ Ask how electrical capacity will be assessed and why any extra equipment is needed.
- ☐ Confirm charger supply, wiring, permit, inspection and finishing work in writing.

A photo is a starting point

Keep the panel's protective cover in place. Let the installer assess the electrical work and equipment. A site visit may be needed before the final scope and price are confirmed.

HOME EV CHARGING

Compare the same installation

Write the scope beside the price. Ask about anything left blank before deciding.

Vehicle / charger model _____

Parking / preferred location _____

Compare the scope	Installer 1	Installer 2
Charger model + who supplies it		
Capacity assessment + any added equipment		
Wiring route + charger position		
Outdoor suitability, if needed		
Permit + inspection responsibility		
Wall repairs / trenching / restoration		
Parts + labour warranty / service charges		
Total, tax + payment terms		
Exclusions + estimate conditions		

Still to confirm: equipment, site visit, approval or timing
